| Linear metres | 14.4 | 21.6 / 25.2* | 28.0 | 22.4 | 14.0 |
| Pack weight (kg) | 720 | 670 / 782* | 1000 | | |

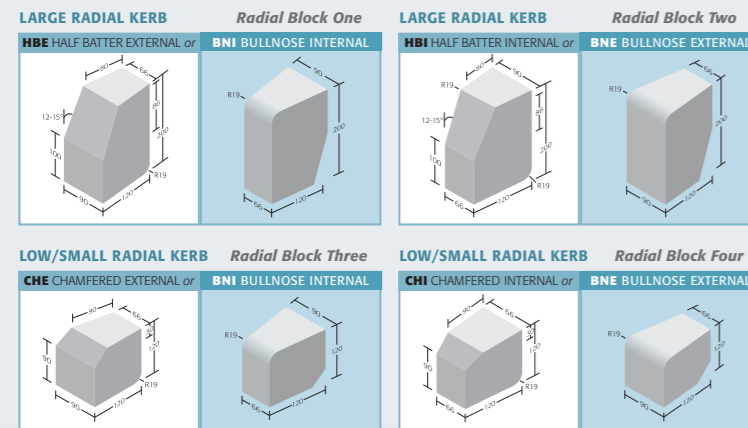

PLASKERB SHOULD BE ORDERED PER LINEAR METRE IN FULL PACKS *WESTERN DIVISION

PLASKERB RADIAL BLOCKS

HALF BATTER, CHAMFERED AND BULLNOSE

Plaskerb Radial Blocks have been designed to reduce the need for cutting on site. They are available in two sizes, large and small, and have two different profiles on each block. They can be laid one way with a half batter or the other way with a bullnose edge and are designed to complement the existing range of Plaskerbs and Accessories. Available in four colours, Red, Buff, Brindle and Charcoal, they can be used on their own or combined with standard Plaskerbs to create the finishing touches to any drive or patio area.

The **PLASKERB** range of **KERBS** and **ACCESSORIES** has been specifically designed to give that distinctive edge to your driveway, path or patio. Edging not only looks good but it is essential to prevent the escape of the laying course material from beneath the paving. Laid along the perimeter of a paved area, **PLASKERB** units also help to support traffic loads. They contain lateral movement and prevent rotation of the blocks under load.

You should discuss the following areas of detail with your paving contractor and these need to be agreed, planned into the design and included in the estimate:-

- **KERBS AND OTHER FORMS OF EDGE RESTRAINT**
- **DRAINAGE CHANNELS**
- **MANHOLES**

EDGE RESTRAINTS FOR PATHS AND DRIVEWAYS USING PLASKERB & PLASPAVE BLOCKS

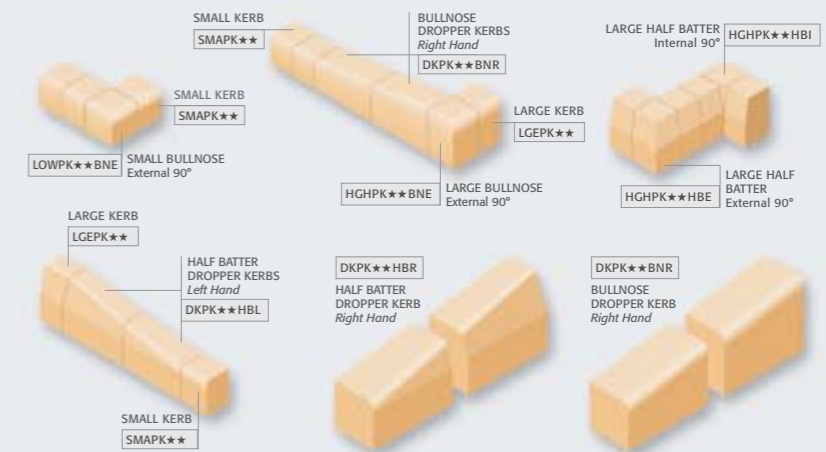

MANHOLES

Plaspave laid in a stretcher or soldier course can be used to make a feature of unsightly ironwork such as manholes. Where the manhole cover has straight sides, blocks can be laid in a stretcher course and butted up against the unit. Alternatively, a recessed manhole cover can be incorporated into the laying pattern as shown here.

VERSATILE PLASKERB UNITS TO SUIT A RANGE OF APPLICATIONS

★★ COLOUR SPECIFICATION KEY BRINDLE BL • CHARCOAL CL • RED RD • BUFF BF • Example - SMAPKCL Small Kerb in Charcoal

PLASKERB CHANNEL BLOCKS

These Channel Blocks are specifically designed to help clear standing water and drainage in most domestic driveway applications.

COMO CIRCLE STARTER SETT

This Starter Sett is ideal for use as the centre block of a Como Circle feature.

Conventional concrete block paved areas are impermeable pavements, so a surface water drainage system should be installed. Channels can be constructed using rectangular paving blocks or proprietary drainage channels. Plaskerb Channel Blocks are available in small (3.2 lin.m) or large (33.6 lin.m) packs to suit project size.

PLASLINE
MINI CHAMFERED PLASPAVE

Plasline is appropriate for all surface areas subject to traffic by vehicles, wheelchairs, pushchairs. The minimal nature of the chamfer virtually eliminates the uncomfortable vibration and bumping associated with full chamfer paving. Maintenance is reduced as moss growth is minimised.

PLASMOBILITY Kerb 99

Plasmobility Kerb 99 has been designed in accordance with disabled access guidelines and it is recommended that this kerb is used in conjunction with Plasline.
